

Several Webl reports were corrupted over the weekend of April 10th. Monitoring Report 02: Dynamic Search Tool - WPFN Replacement Report is experiencing issues and may not be returning correct results. Several other Webl reports are displaying duplicate input controls, but seem to be functioning normally.

We are investigating solutions, including completely rebuilding the damaged reports.

If you encounter any reports that do not open or appear to be returning incorrect data, please let us know.

We apologize for the inconvenience and are working hard to fix the corrupted reports.
